Skin contact: Remove all contaminated clothes and footwear immediately unless stuck to skin

Drench the affected skin with running water for 10 minutes or longer if substance is still

on skin. Transfer to hospital if there are burns or symptoms of poisoning.

Eye contact: Bathe the eye with running water for 15 minutes. Transfer to hospital for specialist

Ingestion: Wash out mouth with water. Do not induce vomiting. If unconscious, check for breathing and apply artificial respiration if necessary. If unconscious and breathing is OK, place in

the recovery position. Transfer to hospital as soon as possible

Inhalation: Remove casualty from exposure ensuring one's own safety whilst doing so. If

conscious, ensure the casualty sits or lies down. If unconscious and breathing is OK,

place in the recovery position. If unconscious, check for breathing and apply artificial respiration if necessary. If breathing becomes bubbly, have the casualty sit and provide

oxygen if available. Transfer to hospital as soon as possible.

# 4.2. Most important symptoms and effects, both acute and delayed

Skin contact: There may be redness or whiteness of the skin in the area of exposure. Irritation or pain

may occur at the site of contact. Absorption through the skin may be fatal

Eye contact: There may be severe pain. The eyes may water profusely

Ingestion: There may be soreness and redness of the mouth and throat. There may be vomiting

Convulsions may occur. There may be loss of consciousness.

Inhalation: Sensitisation possible by inhalation. There may be shortness of breath with a burning

sensation in the throat. There may be tightness of the chest. Absorption through the

lungs can occur causing symptoms similar to those of ingestion. Convulsions may

occur. There may be loss of consciousness.
